POOL TERMINOLOGY

SKIMMER POOLS

The freeboard swimming pool also widely known as the skimmer pool has been one of the most frequently built swimming pools. This particular design enables a more cost effective and maintenance services-friendly option. Generally the upper perimeter is finished with an edging tile or coping stone, the water level is usually regulated around six inches below the pool surround. This type of swimming pool can be very flexible and can often be made in nearly any shape.

OVERFLOW POOLS

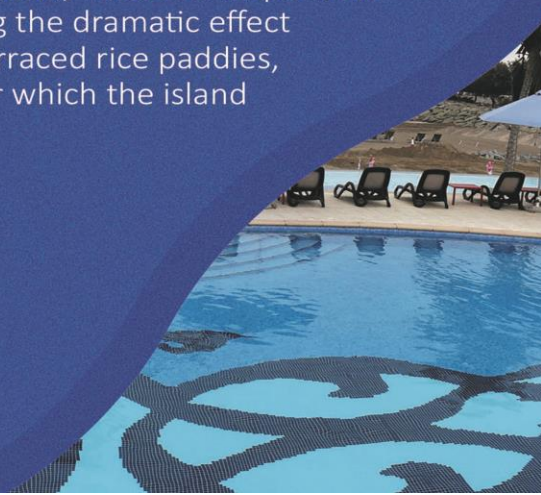

This would be a pool where the water level in the pool is the same as the top of the decking. Around the pool perimeter is a channel or notch that the water drains into creating a visual masterpiece. It looks like a big mirror lying on the ground. The water's surface looks like a flat sheet of glass or appears to be perfectly contained without walls.

This effect is created by a perimeter overflow, a style used in many modern swimming pool designs in which the water overflows its edges and flows into a hidden slot or catch basin where it is then recycled back into the pool. This function is similar to an infinity-edge pool, but with a perimeter overflow, the water overflows on all four sides.

INFINITY POOLS

Also named negative edge, zero edge, disappearing edge or vanishing edge pool is a swimming or reflecting pool which produces a visual effect of water extending to the horizon, vanishing, or extending to "infinity". They are often seen at fancy or exotic resorts, exclusive estates, and in advertisements. The infinity pool design concept is said to have originated in Bali, Indonesia, where its inspiration came directly from observing the dramatic effect created by the ubiquitous terraced rice paddies, known locally as "sawah", for which the island is famous.

Pre-Fabricated SWIMMING POOLS

Pre- Fabricated Pools

Traditionally, permanent pools were built from reinforced concrete, and tiled on site with comparatively high expenses, work complexities and thus require more time for the completion on this approach. The quality of the pool and probability of leakage is strictly with subject to the level of water proofing and supervision. Pre-Fabricated pools were designed and built with premium quality standards to enhance the lifestyle by saving more time, totally leak proof, cost-effective, avoiding complexities, and increase the value of property.

Alternatives such as GRP Pools provide a quick and easy approach to this context. The GRP pools are manufactured in our factory premises along with proper pipe fittings and provisions for further filtration systems and pool lighting. The pool is hand tiled with premium quality Ceramic Mosaic/ Glass Mosaic tiles and Epoxy Glue for the fixing, ensuring premium quality standards. Each GRP Pool is permanent of exceptional quality, 100% leak proof and long lasting as the pool shell never undergoes any sort of property changes as it is inert and does not react with water. We have a wide range of custom made swimming pools for our clients to choose from the gallery, depending on their requirements and lifestyle.

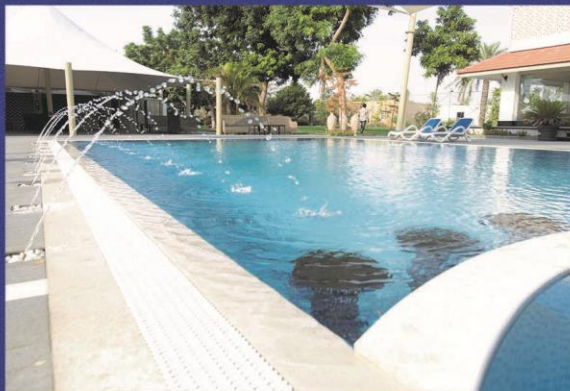

Glass reinforced plastic (GRP)

Glass Reinforced Plastic (GRP), otherwise known as Fibre Reinforced Polymer (FRP), offers many advantages over metallic and concrete alternatives, especially when compared with steel equivalents. Benefits such as resistance to corrosion and chemicals, high tensile strength and non-conductive properties, combine to deliver a highly cost effective, durable and sustainable product.

Manufacturing method

Chopped strand mat or CSM is a form of reinforcement used in fiberglass. It consists of glass fibre laid randomly across each other and held together by a binder. It is typically processed using the hand lay-up technique, where sheets of material are placed on a mould and brushed with resin. Because the binder dissolves in resin, the material easily conforms to different shapes when wetted out. After the resin cures, the hardened product can be taken from the mould and finished. Using chopped strand mat gives a fiberglass with isotropic in-plane material properties. The Hardened GRP shell hence tiled with Ceramic mosaic / Glass mosaic tiles using Epoxy Glue and Epoxy Grout to keep the elegant finish for our product.

Fiberglass Pool Advantages

Speed of Installation

Because the fiberglass pool shell is manufactured off site, the installation of the shell typically occurs in about two days. Compare these two days with three to six months of time for a concrete pool, and we're talking about a huge difference in the duration of time your site is in disarray, and often the difference between swimming this year and waiting until next summer.

Low Maintenance

Why are fiberglass pools so easy to maintain? It all has to do with surface porosity. In addition, chemical usage in concrete pools is much higher because of the need to penetrate the pool surface to kill algae. Concrete pools also require daily doses of muriatic acid to lower the pH of the water. This is because concrete is alkaline based and constantly increases the pH of pool water. Fiberglass pools, on the other hand, are inert and do not effect water chemistry in any way. For these reasons, fiberglass swimming pool owners typically spend 75% less time and money maintaining their pools. This means anyone who owns a fiberglass pool will spend more time in the pool and less time maintaining it.

Durability

Because fiberglass swimming pools have no liner, there's no need to concern you with puncturing the pool surface. Fiberglass pools are incredibly strong and durable, so there's no need to be concerned about damaging the pool during daily use.

Attractive Look

Over the past 30 years, fiberglass pools have transformed from the typical white bathtub you'd find at a rental beach house, to the elegant swimming pool designs and aesthetic features that are now as much works of art as the pool. This is due to advancements in the industry such as beautiful coloured finishes, ceramic tile, tanning ledges, water features, stunning pool lights, elevated spas, poolside walls, etc. This is one of the many reasons why fiberglass pools have gained exponential market share over the past decade.

Compatibility with Salt Systems

Salt chlorinators have proven to be a low maintenance, high water quality option for pool owners. However, if you have ever seen what de-icing salt does to the surface of a sidewalk, you can guess what it does to the surface of a concrete pool. In our opinion, this makes the combination of salt systems and concrete pools unfavourable.

Resale Value

If a pool comes with the property, home buyers want something that looks good, needs little maintenance, and will last a long time. Vinyl liner pools need a new liner every 3-6 years, and often a buyer will require the current owners to replace those themselves. Vinyl liner and aboveground pools don't look great, either, and can detract value. By contrast, a fiberglass pool adds to the value of your home. Low maintenance, beauty and durability are a win-win for both parties.

Concrete Pool Disadvantages

Slow Installation Time

In contrast to fiberglass and even vinyl liner pools which can be completed in several weeks, it's not uncommon for concrete pools to take three to six months or longer to finish. Construction takes a toll not only on the backyard, but on the family as well.

More Hands-on Maintenance

By its very nature, concrete is extremely porous. This gives algae a place to call home. Once embedded into the surface of a concrete pool, algae are extremely tough to remove. In fact, concrete pool builders recommend brushing the entire surface of the pool with a steel brush at least once a week to remove any algae that are on the surface.

More Chemical Usage

Water chemistry is another issue with concrete pools. Because the algae embed into the surface, more chemicals are required to reach and destroy it. This requires more time and money to maintain the pool. Also, concrete is alkline-based which constantly increases the pH of the pool water, requiring the regular addition of acid to keep it in balance.

Incompatible with Salt

As mentioned earlier, salt and concrete don't mix. The dissolved salt in the pool water will shorten the life expectancy of the interior finish of a concrete pool. Thus it requires more frequent refinishing.

High Cost of Ownership

The concrete pools cost exponentially more money to own. Acid washing by professionals every three to five years, more money in chemicals, more money spent on electricity, and refinishing/remodelling all add up to tens of thousands of dollars more over the years.

Rough Interior Surface

The rough interior of a concrete pool does harbour algae growth, but that's not all. It can take a toll on tender feet as well. In fact, most kids who play in concrete pools on a regular basis have to wear water shoes to protect their feet from becoming sore and blistered.

Modern Fibre Glass pool Vs Conventional Concrete Pool

SWIMMING POOL *Maintenance*

Whether it's a new pool or an existing pool, we can offer maintenance to accommodate all requirements. As swimming pool installers and engineers, our Service Department can arrange maintenance visits at intervals to suit so that you are able to enjoy your pool facility to the maximum. Our maintenance contracts are tailored to your individual requirements. Our site visits including vaccuming, backwashing and checking filtration plant, underwater light replacements and chemical analysis of your pool water. Our engineers are approved specialists in installation and repairs of automatic pool covers and automatic dosing systems and are able to work both commercial and domestic pools.

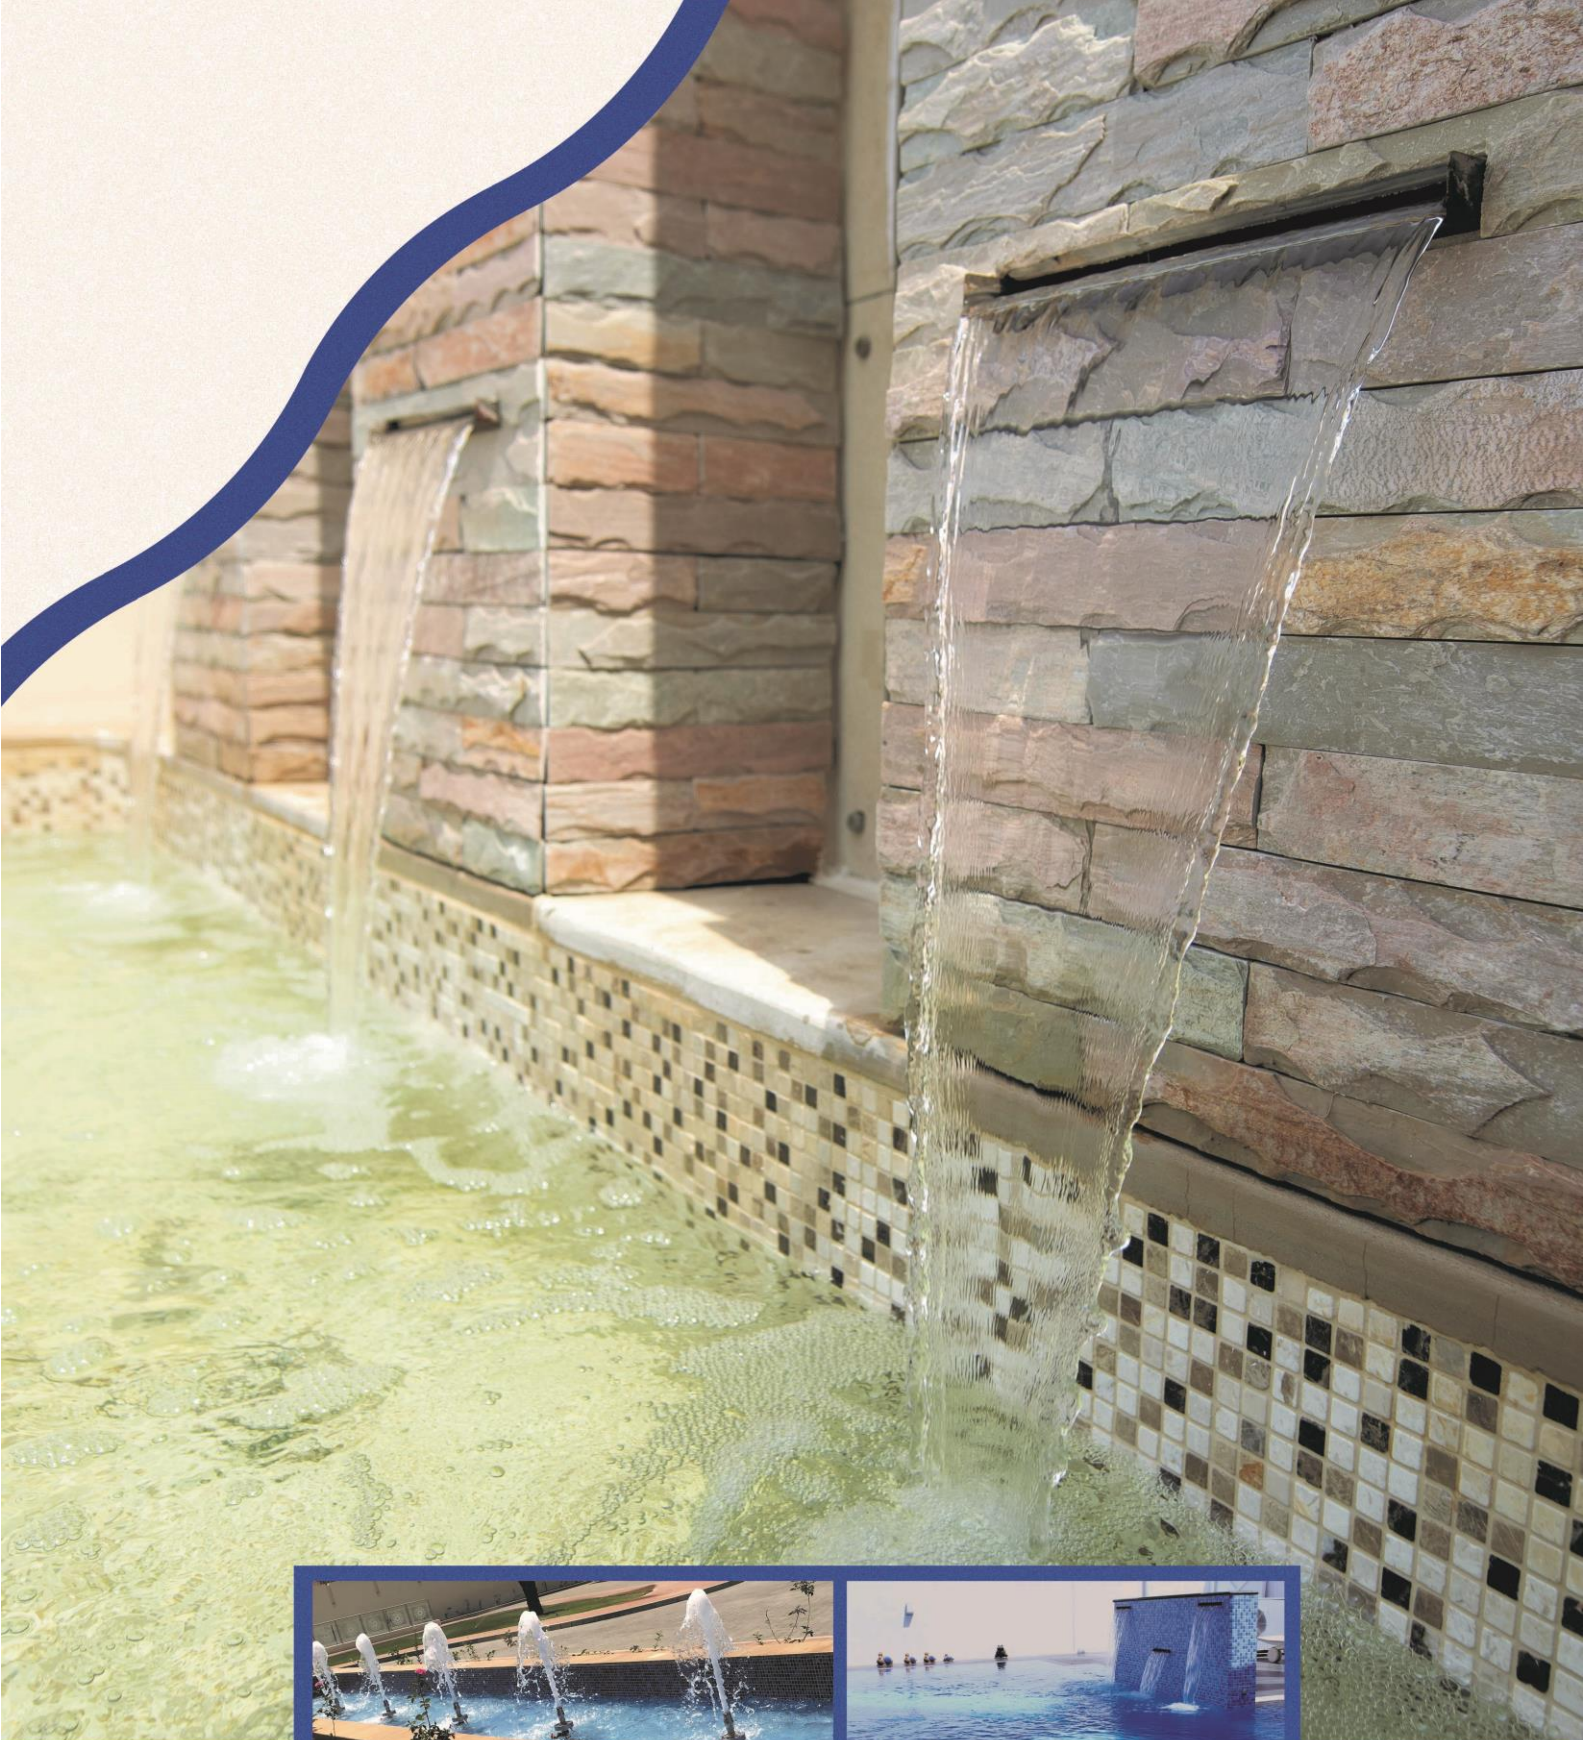

REFURBISHMENT

- Upgradation of your concrete pool to GRP Pool
- Re-tiling and tile repairs
- Re-grouting
- MEP troubleshooting & rectification

UP KEEPING SERVICE

- vacuuming
- Cleaning
- Backwashing and checking filtration plant.
- Chemical analysis of pool water

WATER FEATURES

Water features are one of the most important aspects while planning landscape projects, which enhances liveliness of landscape. It requires appropriate selection of features and precision in development. We enjoy to work for different and innovative kind of water fountains and luxurious swimming pools.

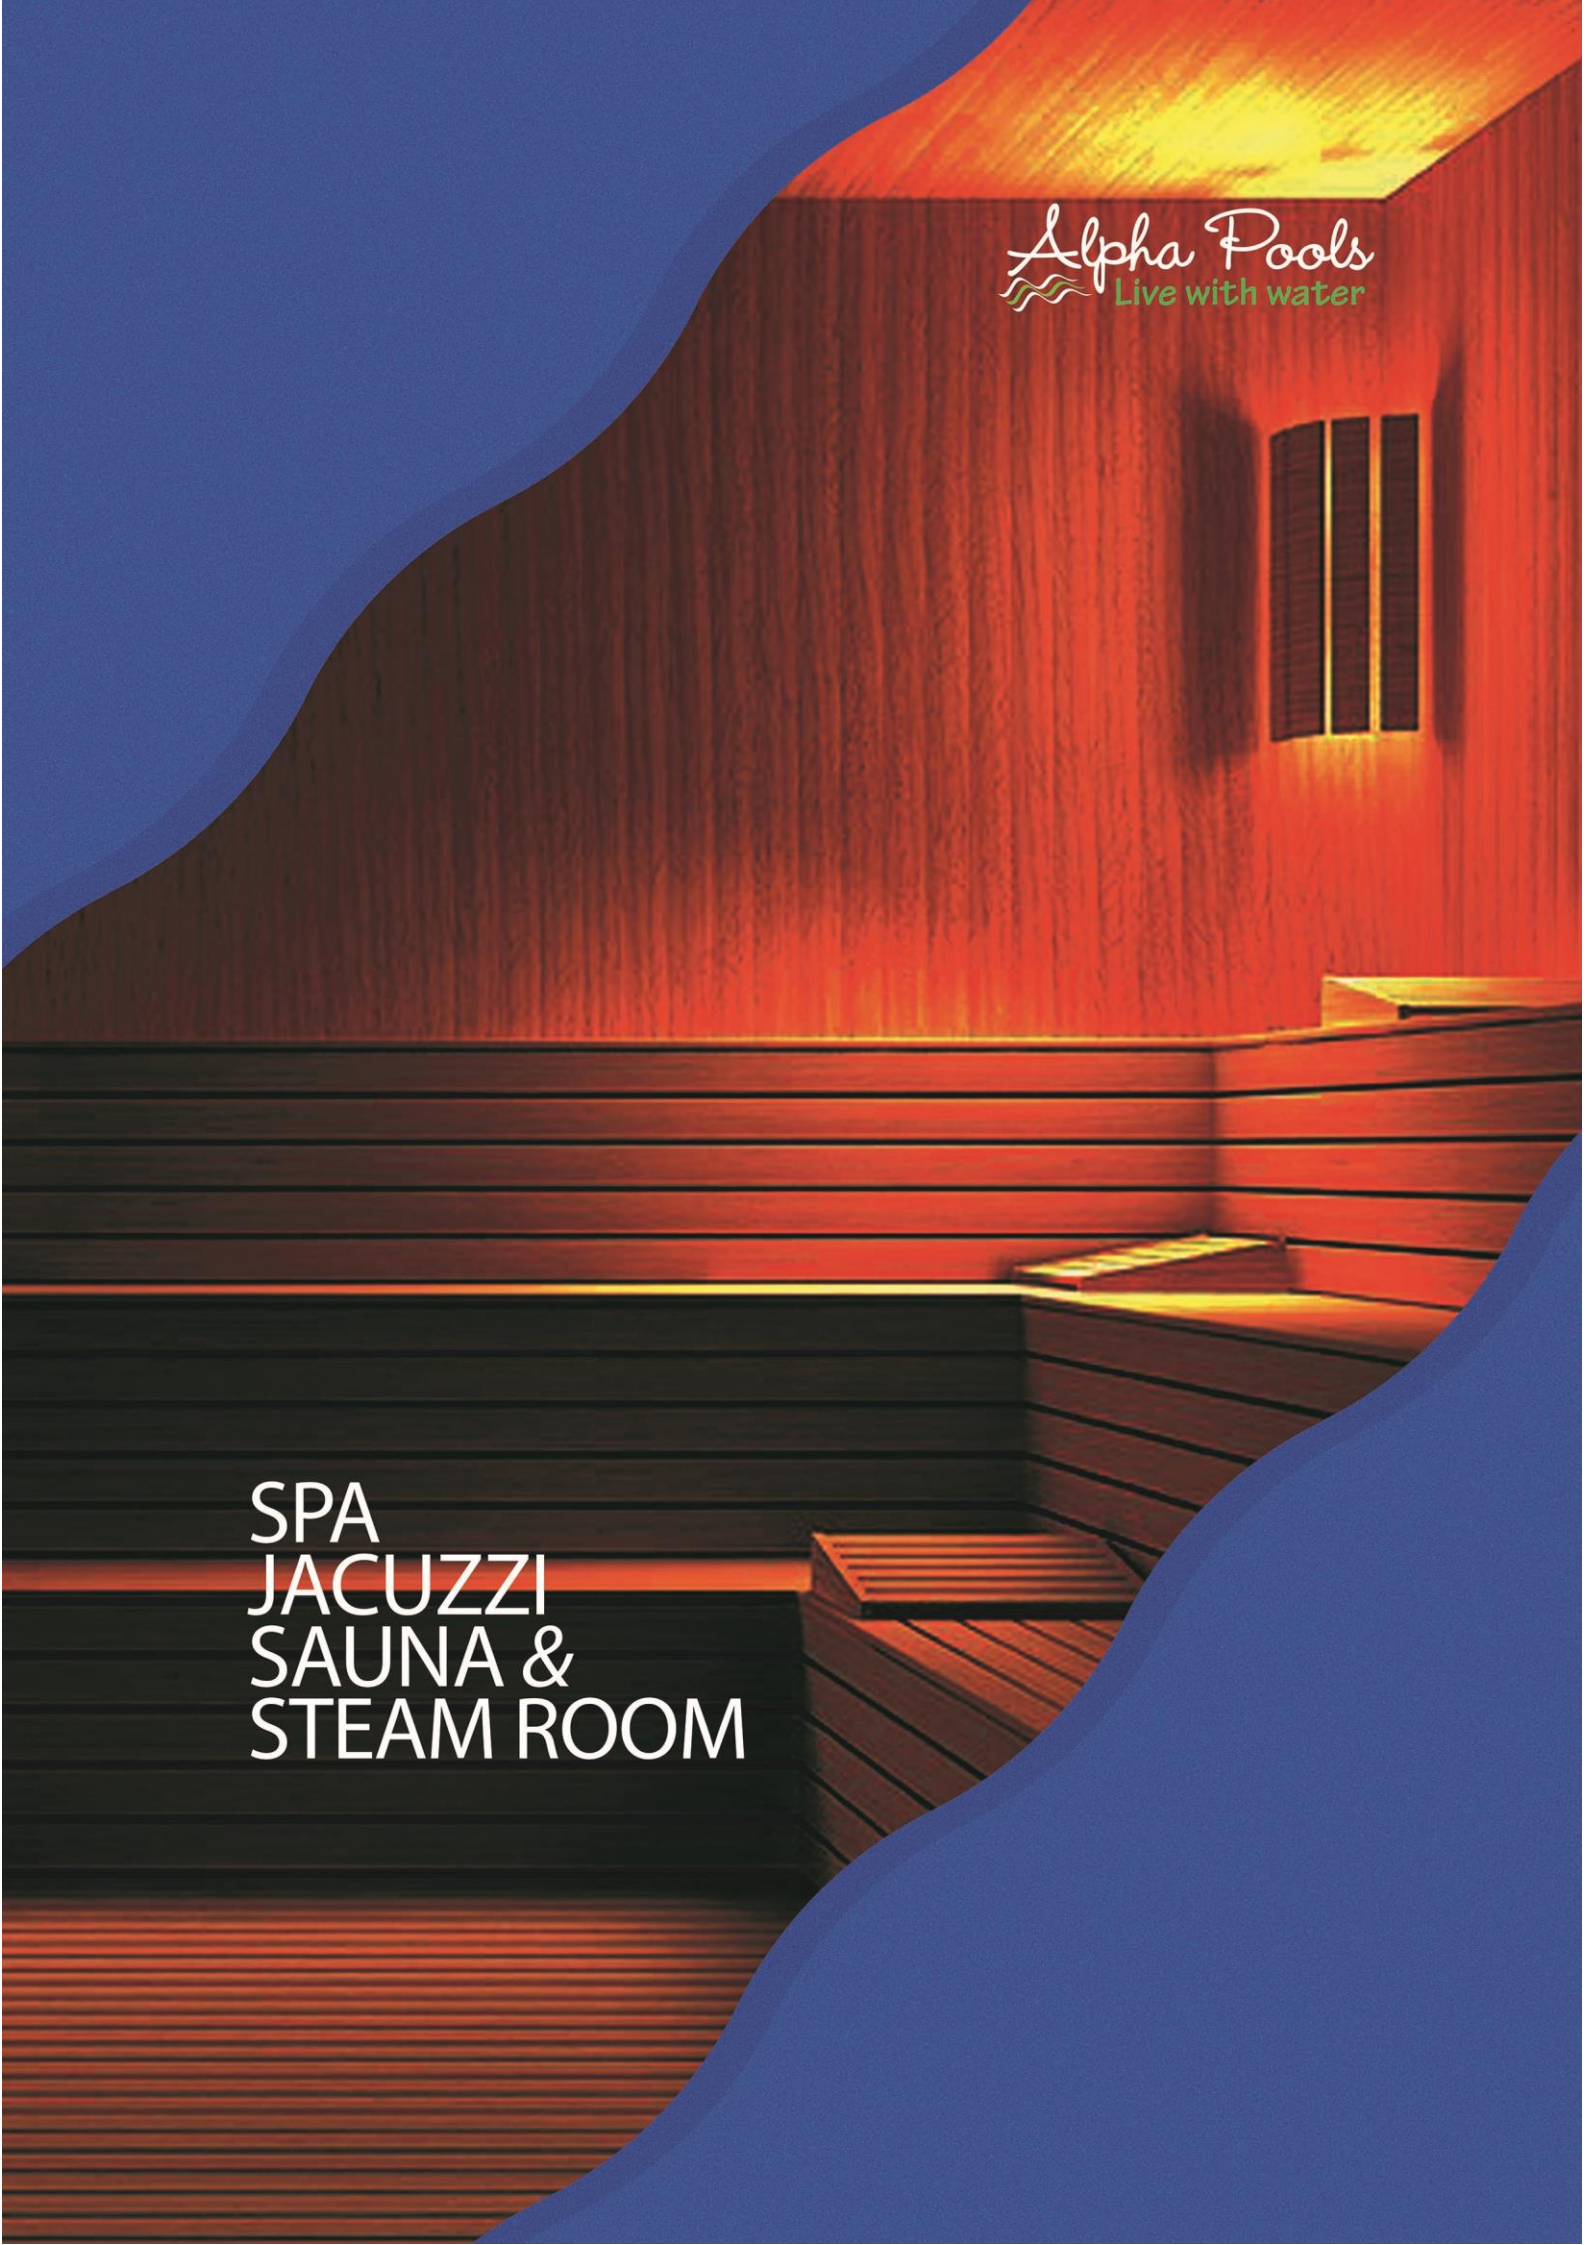

A Spa is a great way to add style and glamour to your outdoor living space whilst also being energy efficient to run and easy to install. The soft wall construction gives ultimate user comfort whilst providing inbuilt insulation.

Our Jacuzzis, Sauna and Steam Room are high quality, providing elegant, professionally constructed and aesthetically flexible designs to fit the setting and client demand. We offer different types of Jacuzzi, Sauna and Steam Room that is extensively used in households, hotels and other establishments.

These systems are ideal for providing the body relief from pain and body aches. These high – performance products celebrate the water’s ability to refresh and rejuvenate in inspiring ways.

LANDSCAPING

SYNTHETIC GRASS

Low-maintenance, eco-friendly synthetic grass is always green year-round.

PEBBLES

Stones and decorative pebbles are wonderful materials that embellish any patio landscaping ideas and create unique garden path designs that allure all. The smooth curved pebbles are available in colours ranging from brown and grey to red and blue tones, the rocks are suited to many outdoor and indoor settings or styles. Typically pebbles are used to decorate pathways, ponds and landscapes.

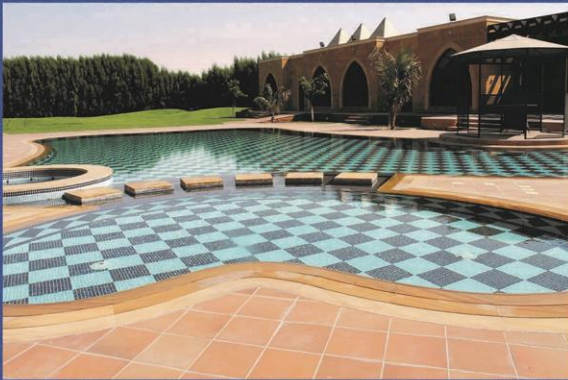

COURTYARD GARDEN

A garden within the garden, courtyards are living place to get relaxed and an inviting space for chatting, reading or napping beneath the shade of a settled tree set in the corner of your garden.

GARDEN LIGHTING WITH ECONOMICAL & ENERGY SAVING

Make your landscapes safer and more attractive with energy-efficient, eco-friendly outdoor lighting. Natural lightening is one of the best choices, where sunlight is the cleanest and cheapest method of lightening your landscapes during the day. Solar powered lights are another choice for energy efficient way to light your pathway, driveway, or to add decorative lighting to your garden will be a special feature. Soft lighting in a dark outdoor environment is the latest trend in lightening as it provides a warm, inviting ambiance that energizes your outdoors. Creating a glowing vision that truly uplifts your landscape is our promise.

SPORTS FLOORING

Vinyl Sports Flooring has been used worldwide for indoor sports since 1900. Basketball courts, volleyball courts, and athletic surfaces are the number one choice of sports leagues, national governing bodies, convention centers, and corporate sponsors looking for a rapid-install, quickly removable flooring solution that delivers high performance and safety.

GARDEN MANAGEMENT

Developing a relationship of trust, honesty and integrity that makes our clients to feel friendlier and us strongly believe that, our success is dependable on this friendliness and trust. Outdoor and indoor gardens, both, environment require special care and attention and to ensure that happens accordingly, our comprehensive garden management programmes serves best to our property owners. Responsible for understanding and maintaining everything about your garden like which plant is needed, the mechanical system, suitable landscape structures and retaining the freshness, our garden manager will assist you always. Our skilled landscape technicians and horticulturalists are ready to help you on the best program of care for all the working parts of your outdoor and indoor living space both natural and man-made environments.

LANDSCAPE CONSTRUCTION BY SKILLED WORKERS

Identifying the demand and implementing the plan is the nucleus of landscape designing. And managing things with skilled workers will make your design perfect. Perfection of any landscape project is the main concern for both designers and customers. Providing and doing work with skilled labours is one of the highlights of landscape constructions.

NATURAL STONE & INTERLOCK PAVING

One of the main services of Green Planet is the Natural Stone and interlock paving as we are the best installer. Design a driveway or patio with interlocking pavers or natural stones in various colours, textures and stone types will add more charm to your landscape design. Strong and durable and possess timeless charm, the choice of natural stone in interlock will enhance your patio a beautiful private outdoor space to amuse family and friends. Lifetime warranty and design flexibility is another highlight.

WATER STREAM

A feature that adds your garden look like naturally built. Including water stream in your garden make it feels fresh always and can change it into an aquarium to your favourite fishes. The sound of the gurgling waters will always make your mind relaxed.

POP UP SYSTEM

Pop-up watering systems are easy to install and is considered to be an easy watering facility. Watering your lawn effortlessly, pop up sprinklers are fast becoming the new must-have landscape service. The convenience of having your garden automatically watered, even when you're away on holiday is the main attraction of pop-up sprinklers. Pouring down the exact amount of water required to keep your garden lush and green, is another reason why this watering feature are becoming so popular.

DRIP IRRIGATION

A highly efficient way to water and it saves your time and helps to preserve water. With its flexible features and low-pressure emission, in drip irrigation it deposits water only where it's needed, preventing it from being wasted and thereby save water. Instead of casting wide spray drip irrigation trickles out tiny quantities of water to provide fixed soaking in specific places. Adapted by farmers all over the world, the main benefit of this watering system is the savings of both time and effort.

VARIETIES OF INDOOR PLANTS

Good collection of indoor plants like orchids, anthurium, spider plant, alocasia, English Ivy, Jade plant, Diffenbachia, Peace lily, snake plant, ficus, areca palm, aloe vera and our list goes on.

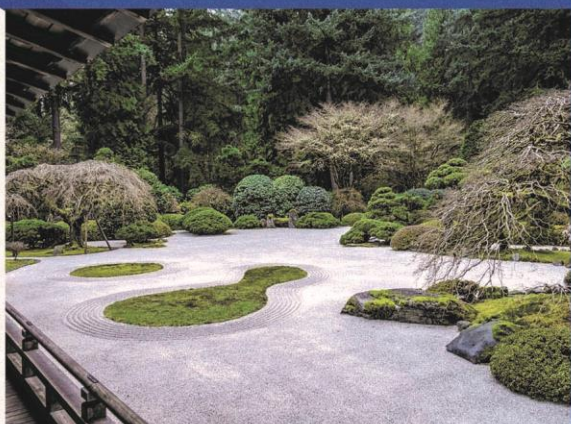

VERTICAL GARDEN

Perfect and easiest way to add colour to your front and back yards... A new innovative and environment-friendly green solution to the dwindling horizontal spaces, vertical gardens offers the option of having greenery growing vertically. These gardens help in improving the aesthetics of concrete structures and preserves energy by insulating buildings, reducing the need of air-conditioning. The vertical gardens are living walls which stands free or as a part of the building structures offers choices of planting varieties of fauna ranging from grass to herbs and even farming can be done in this.

GAZEBO

An ideal design choice that makes landscaping look more attractive and it adds a useful structure to your garden or courtyard design by offering a beautiful sheltered place for dining and rest. Enclosed garden structures, the gazebo offers numerous selections in the models ranging from traditional tower houses, Japanese house model, Victorian architecture, colonial outlook and the more. Mostly made of wood and glass, the gazebo brings more comfort into your landscape design.

JAPANESE GARDEN

A miniature of Japanese landscape in your front yard... Japanese garden design offers a tasteful and colourful contrast to the green world-weariness. These garden designs give the look of traditional gardens that create minuscule idealized landscapes, often in a highly abstract and stylized way. Traditionally designed by Japanese architect for contemplation and meditation, the garden design is based on Japanese materials and culture.
